Focus on Qualitative Methods

Sample Size in Qualitative Research

Margarete Sandelowski

A common misconception about sampling in qualitative research is that numbers are unimportant in ensuring the adequacy of a sampling strategy. Yet, sample sizes may be too small to support claims of having achieved either informational redundancy or theoretical saturation, or too large to permit the deep, case-oriented analysis that is the raison-d'être of qualitative inquiry.

A common misconception about sampling in qualitative research is that numbers are unimportant in ensuring the adequacy of a sampling strategy. The "logic and power" (Patton, 1990, p. 169) of the various kinds of purposeful sampling used in qualitative research lie primarily in the quality of information obtained per sampling unit, as opposed to their number per se. Moreover, an aesthetic thrust of sampling in qualitative research is that small is beautiful. Yet, inadequate sample sizes can undermine the credibility of research findings. There are no computations or power analyses that can be done in qualitative research to determine a priori the minimum number and kinds of sampling units required, but there are factors, including the aim of sampling and the type of purposeful sampling and research method employed, which researchers can consider to help them decide whether they have collected enough data.

lected enough data. These factors are the subject of this article.

NEITHER SMALL NOR LARGE, BUT TOO SMALL OR TOO LARGE

Adequacy of sample size in qualitative research is relative, a matter of judging a sample neither small nor large per se, but rather too small or too large for the intended purposes of sampling and for the intended qualitative product. A sample size of 10 may be judged adequate for certain kinds of homogeneous or critical case sampling, too small to achieve maximum variation of a complex phenomenon or to develop theory, or too large for certain kinds of narrative analyses.

Reported sample sizes are often too small to support claims of having achieved either informational redundancy (Lincoln & Guba, 1985) or theoretical saturation (Strauss & Corbin, 1990).
